### Service Interruptions:

- None reported

### Remote/Community Isolations:

- None reported

# WEATHER OF CONCERN

## Weather of Concern

- Wet weekend weather for Northern California is still on track with the heaviest precipitation on Saturday. There remains some uncertainty with precipitation amounts on Sunday (which impacts the weekend total) due to the potential "split" of the weather system as it approaches.
- A hard freeze warning is in effect for Friday morning for parts of Kern County. Temperatures will fall into the mid 20s.

## **Active Weather Warnings, Watches and Advisories by County:**

[http://www.wrh.noaa.gov/sto/brief/wwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php)

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

There will be a break in between weather systems today into Friday with partly cloudy skies prevailing, especially for the northern areas. A relatively strong, rather wet weather system will arrive at the coast Friday afternoon and move inland overnight. Rain or snow will hit all areas of the region over the weekend. Only light precipitation is expected Monday, but overall cool, moist and rather cloudy conditions will prevail. Without much of a break between systems, light precipitation is expected again Tuesday into next Wednesday, especially in the northern areas. There is still a lot of uncertainty about the details of the Thanksgiving holiday period/weekend, but it appears likely that some inclement weather should be expected then. Daily max temperatures will mostly be just below seasonal averages for the next 7 days. Some gusty southerly winds will develop Friday afternoon ahead of the incoming weather system and continue Saturday. Gusts may become as strong as 40-50 mph in the windiest locations Friday and Friday night, especially in the mountains and for the Shasta Valley. Somewhat lighter wind speeds are expected Saturday. The lowest snow levels with these systems will vary, but will basically be from 3500-5000 feet in the north and 5500-7000 feet in the south. Some snow accumulation is expected at the lower elevations of those ranges as well with more significant amounts at the higher elevations.

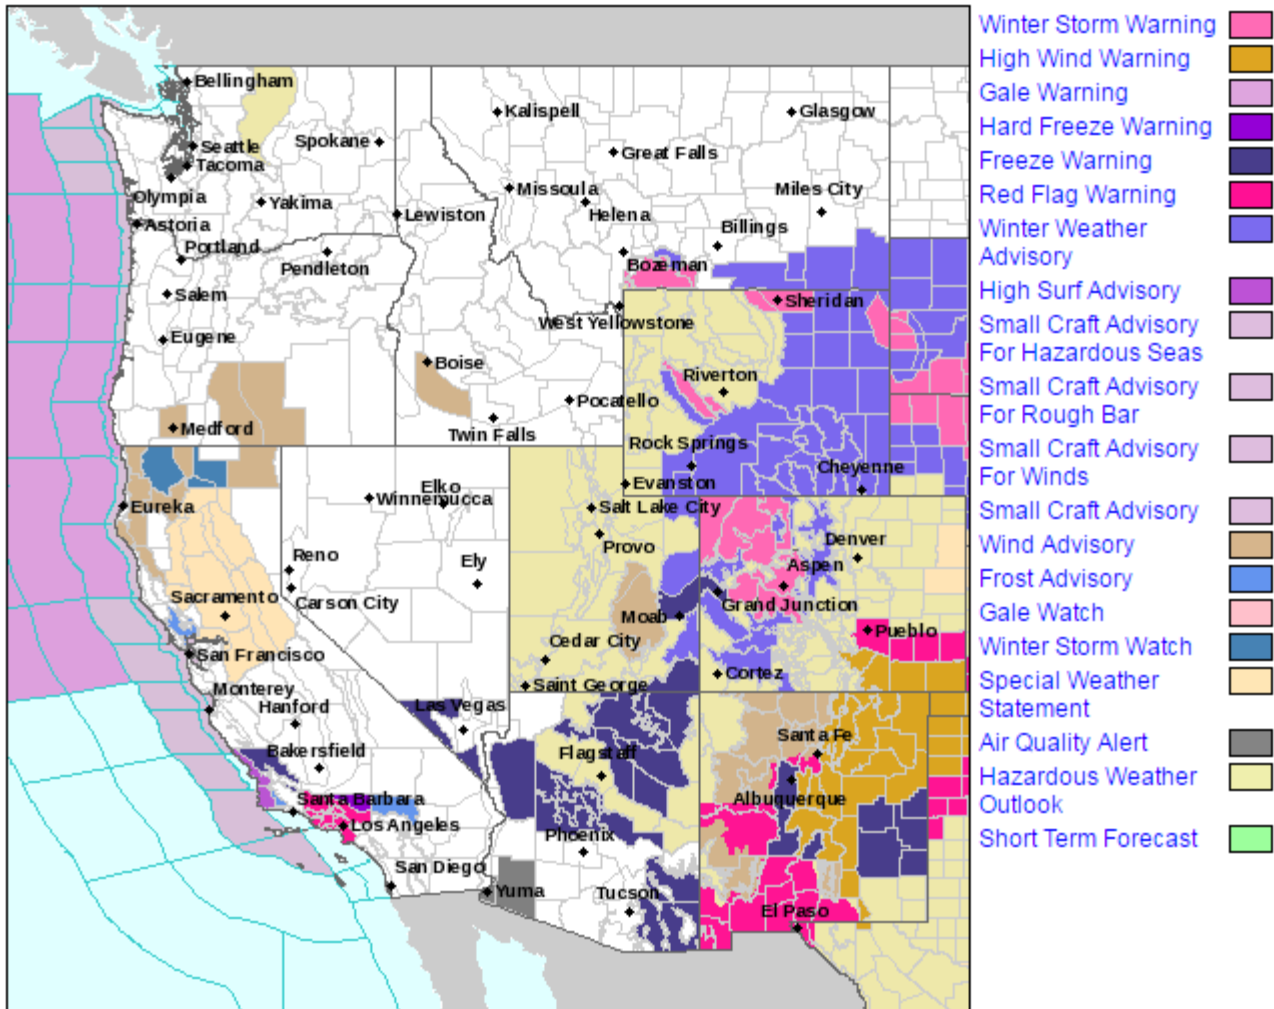

## **SOUTHERN CALIFORNIA**

The back side of a Pacific trough will bring north to northeast winds of 20 to 30 mph with gusts to 50 mph mainly to the mountains and below the canyons and passes of Ventura and Los Angeles Counties this morning. These winds will decrease this afternoon to 15 to 25 mph with gusts to 40 mph and then become northeast to east this evening through Friday morning. Temperatures will remain near to around 5 degrees below normal today with mid 40s to mid 50s across the mountains, mid 50s to mid 60s in the valleys of Central California, and mid 60s to mid 70s in the valleys of Southern California. A weak ridge of high pressure will move across the region Friday and Saturday causing temperatures to warm 5 to 10 degrees. Minimum humidity will be mainly in the single digits and teens away from the Central Valley through Saturday. A Pacific trough will make its way down the West Coast bringing cooling and higher humidity to the region Sunday and Monday. Showers will start over the northern portions of Central California Saturday night and move into Southern California by Sunday night. Showers will end across the region Monday night. A weak ridge of high pressure will follow the trough on Tuesday for brief warming before another trough moves inland into the West Coast Wednesday.
